

John 15:15 – “No longer do I call you servants, for the servant does not know what his master is doing; but I have called you friends, for all things that I have heard from My Father I have made known to you.”

Crossroads of Consciousness

By Tom Zeman

Man's infatuation with fire has lead us towards a global warming trend. "We didn't start the fire, it was always burning since the world's been turning"- Billy Joel. Climate change, and general instability of seasonal weather patterns are a direct reflection of modern man's fossil-fueled termite driven consciousness. This raging fire is within us. Global warming is an insidious state of mind. You may be the reason for global warming.

Crossroads of consciousness come and go but YHWH-consciousness remains forever. Turning on and tuning in to Divine-consciousness is groovy baby. It's a given thing and a terrible thing to lose. One must reach high into the heavens. Once up, there is no turning back. Are you willing to make a stand and buck group-think status-quo bull? The answer is always yes to get a little bit closer to Divine-consciousness. Floating rainbows bridge YHWH's covenant to mankind, now high jacked by the LGBTQ community. Spectrums of infinite light delight themselves in ecstatic waltzes of dazzling colors. Budding plant-life reaches for the sky, feeding on the falling rays of the sun. Can darkness comprehend the light? "Darkness cannot drive out darkness, only light can do that." (Martin Luther King) Where does the electro-magnetic spectrum and life force detected in all things come from, and what is its source? You know you were there. Can nature's evolving internet actually develop its own hardware and software-program all on its own? Does artificial intelligence have a conscience.

Where does the spirit go when the body sleeps? Are we not a blend of physical, psychic and spiritual modalities? Electro-chemical chain reactions carry sparks of life and consciousness connecting the body with its essential soul. Are dream-states of non-consciousness windows to the eternal heavens beyond? Brilliant symphonies of singing souls are out on vacation while we slumber and sleep. Does the soul take cat naps when our bodies awake? Can the soul rejoice in a body that does not accept its source? Was the body made for the day and the soul for night? Are we sleepwalking when Divine-consciousness is not part of our mind? Intuition of YHWH-consciousness is transmitted through the connected soul, because the eternal soul is the only thing to be desired.

And this is exactly what the toxic-enemy of consciousness wants, it wants our immortal souls, lock, stock and barrel, forever unconscious of eternal life. Our battle is not against flesh and blood but against the anti-spiritual powers and forces of the atmosphere. As we pollute the air with toxic emissions, we release demonic ghosts through a chain of metamorphic processes manifesting spiritual pollution. The combustion engine takes in oxygen through the carburetor mixing it with gas in the combustion chamber and exploding it with a spark plug to produce energy and carbon-dioxide that passes through a catalytic converter. The catalytic converter concentrates the deadly gas and emits carbon monoxide (CO) via muffler into the atmosphere that we breathe. Gasoline itself is a by-product of crude oil, which also goes through a metamorphic process at the oil refinery: Oil to gas. Fossil fuels like oil, coal, shale, and natural gas are all by-products of hydrothermal metamorphosis. There are both natural and human sources of carbon dioxide (CO₂) emissions. Natural sources include decomposition, ocean release and respiration. Human sources come from activities like cement production, deforestation as well as the burning of fossil fuels like coal, oil and natural gas. It takes incredible heat and pressure to create metamorphosis. The hydrocarbon graveyard deep beneath our feet is the result of a cataclysmic hydrothermal explosive event. (Genesis 7:11) "In the sixth hundredth year of Noah's life, in the second month, on the seventeenth day of the month, on the same day all the fountains of the great deep **burst** open, and the floodgates of the sky opened." (Genesis 6:13) "The end of all flesh has come before Me; for the earth is filled with violence because of them; and behold, I am about to destroy them with the earth." Global geological shifts bury and transform their dead with devastating efficiency, before decomposition has a chance to occur. Trapped fossil fuels below the strata layers that cover them, are a direct result of ballistic deposition. Antarctica's ice pack owes its homogenous layers to the ensuing ice age that followed the hydrothermal release. The Mid-Ocean Rift Fracture Zone is most likely the remaining substructure of the "fountains of the great deep."

Ironically, modern man has found a way to rob the graves of Nephillim hordes through a triple metamorphic still, polluting the atmosphere with toxic spirits. Where are the ghost-busters when you need them? The air is getting so thick you could cut it with a knife. Who will volunteer to ditch their car first or skip that plane ride to nowhere; I will if you will but you go first. There may be enough oil in Russia alone to burn up what's left of our vital atmosphere. Our shrinking atmospheric shield once diminished past an unknown threshold may

implode to end all life on earth. We all drive our weapons of mass destruction with the pride and impetuous importance of ambassadors and presidents, heralding forth global apocalypse. In a vain struggle to protect ourselves from ourselves, we employ the counterproductive military machine that consumes the lion's share of fossil-fuels to destroy planet earth. In our mad frenzy to ensure national security, we end up confirming mutual destruction. The military wheel which represents mankind's historical warfare experience will keep repeating itself until we spiral into the hub of the wheel of Divine-consciousness; love one another. The spokes of the wheel that make global peace possible are compassionate co-operation, intentional communities living in sustainable environments based on YHWH-consciousness.

Proverbial engines of consciousness in a continual chatter between conscience and denial, rock back and forth in a pendulum motion to repeat hypocritical oaths of self-effacing delusion. Scientific research based on presumptuous evolutionary theories, give us misleading data that may be irrelevant to global climate change. Evolution assumes slow and accumulative build-up of ice layers on the continent of Antarctica despite the fact that no accumulation of additional ice and snow in Antarctica has ever been witnessed, because it is always too frigid for precipitation of any kind to occur. However, speculative theories abound. According to Philip Stott "Global Warming is not a threat to Polar Ice" and he adds "When will we recognize the basic truth that change, both evolutionary and catastrophic, is the norm on our planet." Catastrophic deposition of ice layers yes, evolutionary deposition? Hardly. Erosion exceeds deposition, overall the ice is melting and losing ground. Ho ho ho little mofo from pole to interpole I am black Santa and I just returned from a round trip cruise of the counterclockwise North Pole in the Arctic and the iceblocked clockwise South Pole in Antarctica, now I'm bi-polar and you are the reason for global warming.

Environmental studies confirm the error of our ways only to exacerbate the unredeemable situation at hand. Spinning our wheels as fast as we can, doing circles like racers at Indy 500, or like a dog chasing its tail, we just never really reach our final destination. One just can't ride fast enough to catch up to that dangling carrot just in front of them but always out of reach. Damn it, when does the madness ever end? There are no winners in the fossil fuel race, we simply all lose. It is estimated that it takes a warehouse full of oxygen (30,000 cubic ft.) to burn one gallon of gas. Most of the energy produced inside a combustion engine is derived from exploding oxygen under pressure. Exponentially more oxygen is

consumed by the carbon-dioxide rising up through the atmosphere in an all-consuming chemical reaction. Billions of gallons of gas are burned through the combustion engine on a 24/7 basis, the fossil fuel age may be the last, unless we shift our consciousness and fast. Without the least regard, oblivious consumers of fossil fuel death continue to chase their empty pipe dreams through the belly of the beast.

Speed limits of modern-consciousness are dangerously out of place and on a collision course with disaster. Sometimes it's best to slow down to avoid a head on collision, laws of physics dictate it is safer to go slow. Smog monsters of gargantuan proportions laugh in sheer delight as we continue to add feed to the fodder of an all-consuming fire. At the levy, the good old boys drinking whisky and rye reminisce about the clear skies as they sing bye-bye Miss American pie. U.S. Americans consume the lion's share of all fossil fuels, to support a nation of 350 million on a planet of over 7 billion. Our gigantic fossil footprints have trampled our collective environmental consciousness into unrecognizable dimensions. Bloated with fat, we float in hyper-consciousness of massive social denial. Great humanitarian catastrophes flourish as a result of our gluttony and voracious appetite for raw oil, the black-liquid of meta-physical death.

Since consciousness is not merely a chance occurrence but a result of intelligent cause and effect actions and reactions, the outcome depends on which direction consciousness is heading, creative construction or counterproductive destruction, one or the other. Human consciousness cannot travel in opposing directions simultaneously, and the determined path one is on will match his or her creative or destructive function in life. In my line of work, a treeplanter can either commit himself to planting consistently good trees that stand a good chance of survival, or the treeplanter can dispose himself to stuffing the roots inside a shallow hole and consistently planting trees that will die. As a veteran treeplanter I am witness to modern forestry practices that undermine the eco-structure at a fundamental level (about stump high) and then justify their exploitation by claims of reforestation that attempt in vain to repair an irreparable environment. There is nothing wrong with logging as long as it serves the forest by delicately thinning it out where needed, a ratio of one log to the majority left standing, thus eliminating the need for treeplanting. All wild forests have their start by seed propagation, but man ignores nature and insists on planting genetically modified trees. Super trees bred for board foot production instead of reproduction. If the sky above our heads had a best friend, trees would be that faithful companion. Trees take in carbon dioxide and turn it into oxygen,

the air we breathe. The more trees there are, the more air there is to breathe. Does it not make sense to plant the seeds of trees? Johnny Appleseed consciousness is applicable in today's termite driven unconscious society. Massive reforestation is the only way to stop and reverse global warming. President Donald Trump's bold new vision "The Trillion Tree Initiative" is a major leap in the right direction.

Deforestation of Earth's continents is of major concern, there are less trees now than ever before in recorded history. Demand for more timber products is increasing with population growth, and it is now more urgent than ever to make reforestation a #1 priority; on a global scale. Do we see the forest for the trees when holding a chainsaw in our sweaty hands? No-where else is this more apparent than Brazil's green giant, the mighty Amazon. By far the largest country in Latin America, Brazil is home to the Great Amazon River Basin. This incredible expanse of emerald green forest, with its intricate network of streams and rivers, forms the lungs of the earth. The Amazon is the heartbeat of our atmosphere, pumping out vast amounts of oxygen rich moisture, which converts into streams and rivers. A continuous cycle between land and sky, rain-sunshine-rain, set the pace for a flourishing rain-forest.

Teeming with diversity and abundance of plant life, this vanishing forest is a pharmacopeia for the legal drug industry. Thousands of different types of drugs, are derived or synthesized from these forest plants; urban sprawl, modern farming methods, clear-cut logging, and fires all threaten this most vital forest. Nearly half of the Amazon rain-forest has been converted into farmland and urban sprawl in the last one hundred years. Hawaii used to be the sugar cane capital of the world, this rank was taken by Brazil. We feel and see the dire consequences of mono-cropping sugar cane here in Hawaii, will the same happen to the Amazon?

Brazil is going green, and is a leader in financial investments of sustainable and alternative energy resources. This "Green Giant" is also taking measures to curtail the abuse of the Amazon. Great care and sensitivity must be taken, to properly develop the remaining forest. Ultimately, the fate of the Amazon will lie in the hands of those who own it. Unfortunately, the bulk of Brazil is owned by a handful of very wealthy families. Hopefully, these land tycoons will not repeat the mistakes of the past. If they do continue this alarming rate of deforestation of the Amazon, the consequences will be felt globally. Without the Amazon, planet earth would suffer a severe stroke, if not a heart-attack! The integral vitality of

this one place on earth is so essential to the scheme of the Eco-system, that life may not be possible without it.

There are native tribes within the Amazon, who have never been exposed to the modern man's world and these invisible people must be protected from modern civilization. We have a lot at stake here, within the hands of a few. With the advent of modern machinery, bulldozers, trucks, trains, chainsaws and saw-mills, all have been targeted against the mighty Amazon. When the invisible ones hear the roar of the machines they retreat further back into the forest, smashing emeralds into green powder. They rub their naked bodies with precious but shattered gems, for protection against the odious machine demons.

Brasilia being a developing nation with a burgeoning population, and a taste for power, builds huge hydro-electric dams flooding the habitat of the pure ones. Once these precious people are gone they are gone forever. What can we learn in the present, from these ancient cultures? Will we make our peace with nature before it's too late? Some conservationists say that Brazil is not doing enough to save their emerald rainforest, others praise the government for their valiant effort. However, corruption and scandal, plague the political atmosphere of the Brazilian government. Money, or the love of it, wins out over conscience and good sense.

Whatever the outcome, I remain optimistic, because I believe in the resilience of nature, and inherent goodness of humanity. And this is it; the crossroads of consciousness; humanity versus homo-sapiens consciousness. Will we continue to allow ourselves to be guided by our inherent conscience, or the law of the jungle, and survival of the fittest, or rather frichest mentality? This is the hard question Brazilians are faced with. Yes, Brazil owns a treasure, but what will they do or not do with it? The real value of the Amazon is in its beauty, diversity, oxygen, and water production, this is why it must remain intact. In a sense, the land barons of Brazil hold the fate of the whole world in their hands, because, the Amazon is the essential heart and lungs of the world; a living Earth in peril. Unfortunately, the issue of global climate change / global warming has been hi-jacked by ruthless globalists who bear the largest fossil fuel footprints in order to pursue their global agenda of world rule so they can exploit the world's resources at our expense. CEO and founder of Amazon burns more wood, oxygen and fossil fuels in ten minutes than most individuals would burn in a lifetime.

President Donald Trump's trillion tree initiative is exactly the kind of action humanity must take. A shift from fossil-fuel consciousness to green-earth

consciousness is essential, if we are to make the necessary lifestyle changes to promote a green earth. It is this generation's mission to save planet earth. All the world's nations must reach a consensus of consciousness that will make the issue of global climate change the #1 priority: Plant planet earth revolution. Immediate measures must be taken to stop and reverse global warming by planting billions of Eco-seeds on a global scale. Plant the seeds of trees and save Earth. All natural forests were planted by seed not seedlings. Planting forests is a state of mind. Global climate change is rapidly approaching a threshold of no-return, will awareness of this cataclysmic weather shift alone be sufficient to lead us into the "Crossroads of Consciousness"?
